5-(1,2-benzocyclohepten-5-yl)hydantoin (500mg) was hydrolyzed with a suspension of calcium hydroxide (1.8g) in water (20ml) at 130°C in a

sealed tube for 6 hours.

The insoluble material was removed by filtration. To the filtrate was added di-tert-butylidicarbonate (429mg), triethylamine (2ml), and 1,4-dioxane (30ml), and the mixture was stirred for 18 hours at ambient temperature. Evaporation of the solvent gave a residue, which was acidified to pH 2 with 1N-hydrochloric acid and extracted twice with ethyl acetate. The extracts were combined, dried over magnesium sulfate, and evaporated in vacuo to give 2-t-butoxycarbonylamino-2-(1,2-benzocyclohepten-5-yl)acetic acid (380mg) as an oil.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/JP 98/01695

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☒ Claims Nos.: 1-7
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
see FURTHER INFORMATION sheet PCT/ISA/210
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Claims Nos.: 1-7

All the claims have only been searched partially. The current application describes a very broad and widely ranging range of chemical structures. All of the examples are similar to the compounds of the documents in the search report i.e. 4-spiroindoline piperidines and there is no specific indication that compounds other than these have actually been exemplified. It is impossible to classify all of the potential, but non-exemplified possibilities covered by the current application. The search has therefore been limited to spiroindoline derivatives i.e. the examples and the all claimed compounds containing moiety.
